

Application

Type of machine

Determination of the Required torque

1. Based on the Calculated Torque

Pump: Distance between load and backstop m

Conveyor belt: Jam possible

Static reverse torque Nm

Dynamic reverse torque Nm

Torque not known

2. Based on Drive Details

Power kW

Max. backstop speed min⁻¹

Start in the wrong direction possible

Electro-motor: Torque ratio

Overrunning Data

Overrunning speed constant min⁻¹

variable from to min⁻¹

Mounting Data

Built-in free-wheel

to be mounted in an existing housing

Oil lubrication

Viscosity mm²/s
